

System Features

The Real Estate Management System has the following features:

Property management: Allows real estate agents to add, modify, and delete property information, such as the property's address, type, price, and status.

Client management: Allows real estate agents to add, modify, and delete client information, such as their name, contact details, and preferences.

Transaction management: Allows real estate agents to add, modify, and delete transactions, such as property purchase, sale, and rent.

Report generation: Allows real estate agents to generate reports on property availability, client details, and transaction history.

System Requirements :-

The Real Estate Management System requires the following:-

Operating System: Windows or Linux

C Compiler: GCC or Clang

IDE: CodeBlocks or Visual Studio

Minimum 8GB RAM.
